Slot: F2

E-Learning System for Disabled Students

**Under the Guidance of
Prof Shashank Mouli Satapathy**

Team Members:

- 1) Rathnam Sasidhar Achari – 17BCE0895**
- 2) Sirigiri Susanth Naidu – 17BCE0942**
- 3) Asithureddy Jaganmohan Reddy – 17BCE0478**

1 Introduction

1.1 Document Purpose

This document contains software requirements specification for E-Learning System for Disabled Students and the functionalities. It also contains Hardware requirements and software requirements. It also contains User Interface systems, Communication interface, Functional requirements , Product scope ,User interface etc..

1.2 Product Scope

E- Learning system for the disabled students is a learning website portal, which is designed to help and fulfil the needs of the students with visual, hearing, learning, speaking and physical disabilities. E-learning system is the future of education as it provides the flexibility for students to access materials and learn on their own pace. It is cost effective as it reduces the travelling time and money, thereby making it convenient for the disabled students to learn from their home. The system uses various methods and techniques in order to provide an effective and efficient learning experience to students.

1.3 Intended Audience and Document Overview

This document is intended for Developers and who are willing to finish the unfinished project. Those who are researching on signal conversion and text to speech and speech to text conversion would find this document helpful. It is also useful for project managers, marketing staff, users, testers, and documentation writers.

2 Overall Description

2.1 Product Perspective

Even a slight difficulty in our day makes we feel it as a bad day even if we are physically fit in all ways. Now Consider the same scenario for a person facing the Same hardships with Disabilities and with strong will which we find very rare these days, to live and to prepare himself to face the world.

Our Project is just a small step towards humanity by helping people who suffer from their disability on daily basis. We focus on building an educational website exclusively for these people. Even if it suffices the need of at least one student, we would feel worthy about ourselves.

2.2 Product Functionalities

- Text to Speech recognition.
- Attempting and Preparing Quizzes.
- Assignments.
- Uploading and Viewing Study Materials.
- Uploading Video Lectures with subtitles.

2.3 Users and Characteristics

This Project is mainly designed for Disabled people specially Blind People ,Dumb People, Deaf People using languages like HTML CSS JavaScript PHP and MySQL for database connectivity. We have went through several research papers for implementing websites for these kind of physically disabled people and some set of rules have been followed for creating some interactive websites for these people. All the teachers will be having user accounts and students will be having user accounts, multiple user account should be handled by using language PHP and SQL for database connectivity.

2.4 Design and Implementation

As you enter the software you will get the web page i.e. html page which is divided into three sub divisions for blind ,deaf and dumb.

Our main motto in this project is to work out with disable and if strictly speaking it is more helpful to disable so we thought of going with signal processing through microphone. So when the user enters the software he will choose the disability and according to the choice it takes to the next step.

If he clicks blind (through the voice came from microphone) there he will get two options i.e. sign up and register. If he is already registered he can give his login details through speech with this he is taken to his required page. Similarly when he go for sign up or newly register he will be asking few question about himself for registration . there he can learn about the courses uploaded by the teachers and even he can attempt the quizzes . he will also get the grades regarding his performance.

2.5 User Documentation

Software includes Help section . As disabled people cannot use the interface properly, they get many doubts and question while using the software. To avoid this, we provide Help section through which all the disabled people gets all their doubts solved. Help section is different for

3 Specific Requirements

3.1 External Interface Requirements

3.1.1 User Interfaces

Our system adopts technologies like text-to-speech, etc. for helping the students to communicate with the learning system. This allows students to learn and understand concepts better and they can effectively communicate with E – learning system in cases like answering questionnaires, MCQ has essays etc. This provides a safe environment for the disabled students to concentrate on their education and an effective way to learn.

3.1.2 Hardware Interfaces

Our main motto of the project is for blind and here for blind as they are not able to see they must go through the specific options i.e. only through the speech he listens. The way that we are dealing here is with microphone. So it converts the speech to text and text to speech and maintains the good interface between user and the system. So it is one of the hardware component . and there are few other components like mouse and motherboard and simple infrastructure related to computer.

3.1.3 Software Interfaces

The previous systems were developed based on Java programming language. In terms of performance, the systems were much slower due to compile time overhead and high memory consumption when compared to the other languages like C or C++.The UI design for the web applications written in Java is different from applications developed using native languages.

- Our project aims for building a website for physically disabled people by using languages like HTML, CSS, JavaScript, PHP for designing the website and MySQL for database connectivity.
- All the teachers will be having user accounts and students will be having user accounts.

- Multiple user account should be handled by using language PHP and SQL for database connectivity.
- Each and every new user will be given a sign up form where has to fill all its details and it will be checked.

3.1.4 Communications Interfaces

Here are few ways to communicate between the user and system. For blind they communicate through microphone. So we all know what it does is it converts the speech to text and text to speech and maintains the good interface between user and the system. And for the rest i.e. for deaf and dumb they go through the simple mouse and keyboard. This is how user communicates.

3.2 Functional Requirements

R1: Text to Speech recognition.

Description: In blind login, Whenever the cursor moves to the instruction, System speaks about it so that blind person understands about it

R2: Preparing Quizzes.

Description: Teacher prepares quizzes.

R3: Enrol Courses.

Description: Student can enrol the courses.

R4: Uploading and Viewing Study Materials.

Description: Teacher uploads materials from his/her computer and student views materials.

R5: Uploading Video Lectures with subtitles.

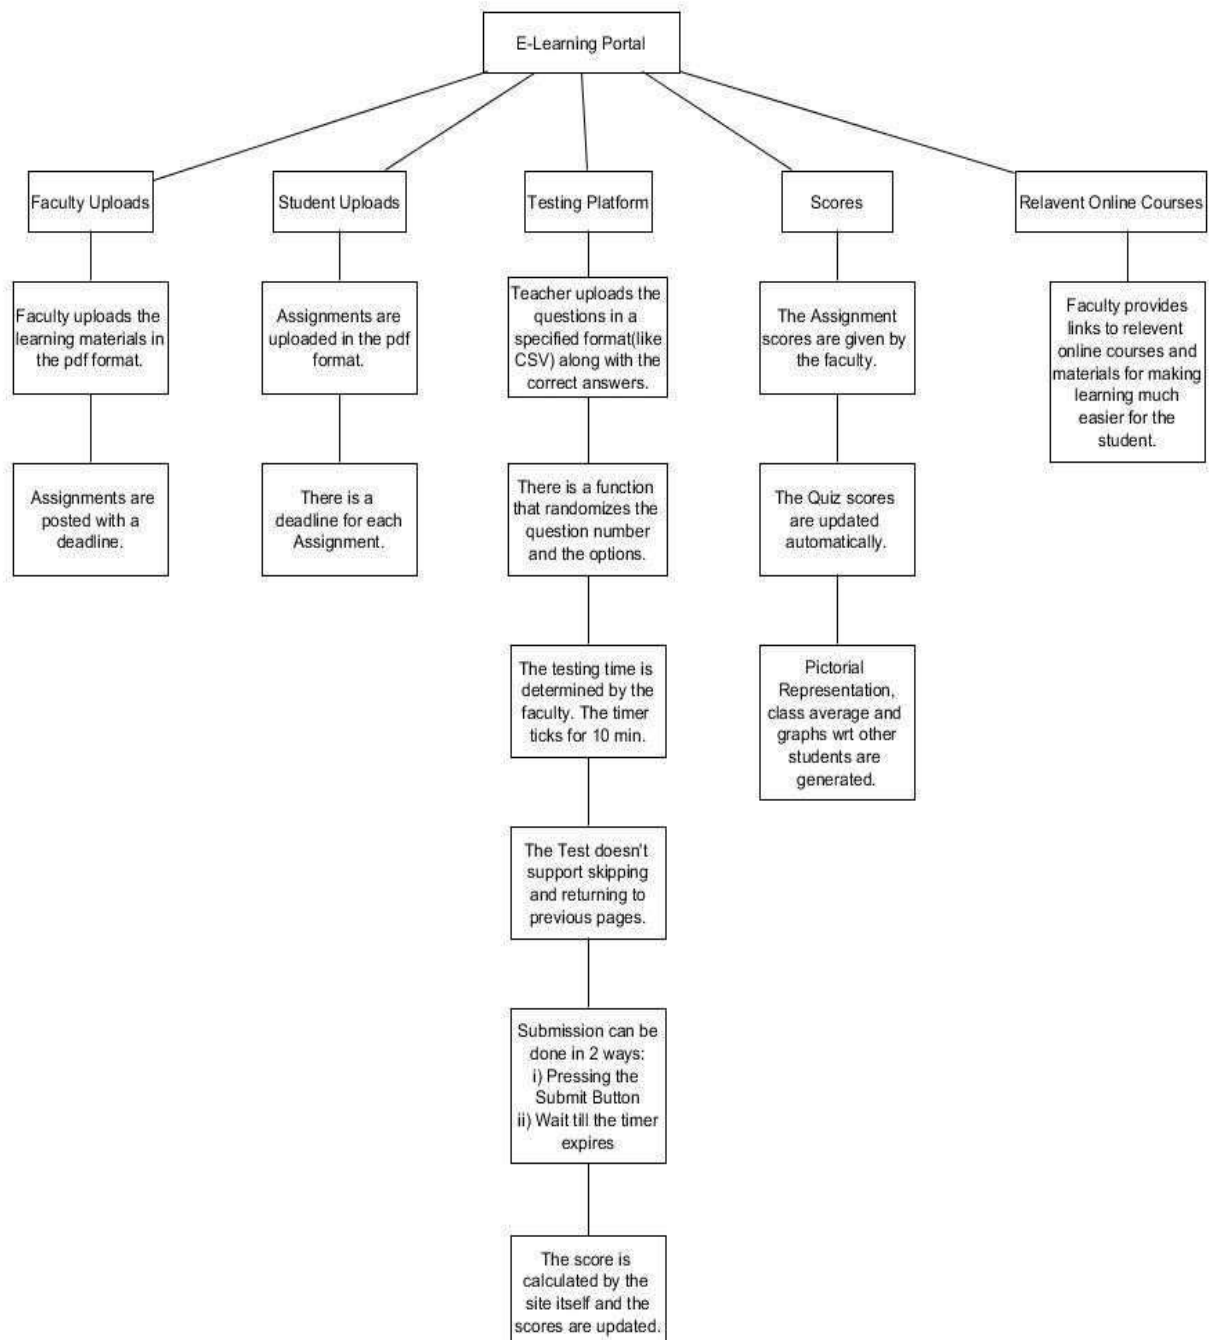

Description: Teacher uploads the videos and student can view all videos.

3.3 Non Functional Requirements

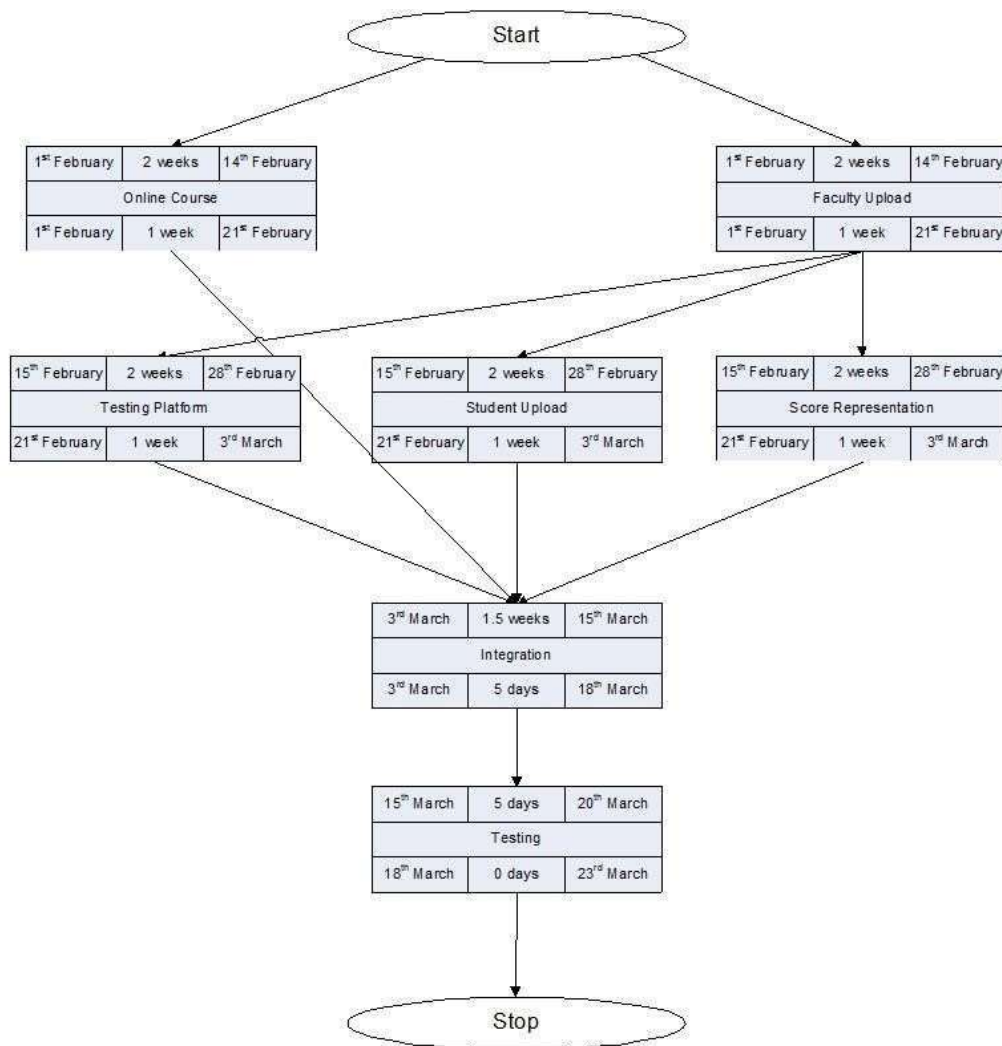

- When the user enters the homepage, he/she should not move the cursor until speech ends.
- User should speak properly through microphone so that it converts it into text.
- User should not perform the tasks very fast.
- User should not perform any task while text to speech conversion is running.

Software is very sensitive as signal conversion takes place at background. So User should handle it properly.

7. Risk Assessment:

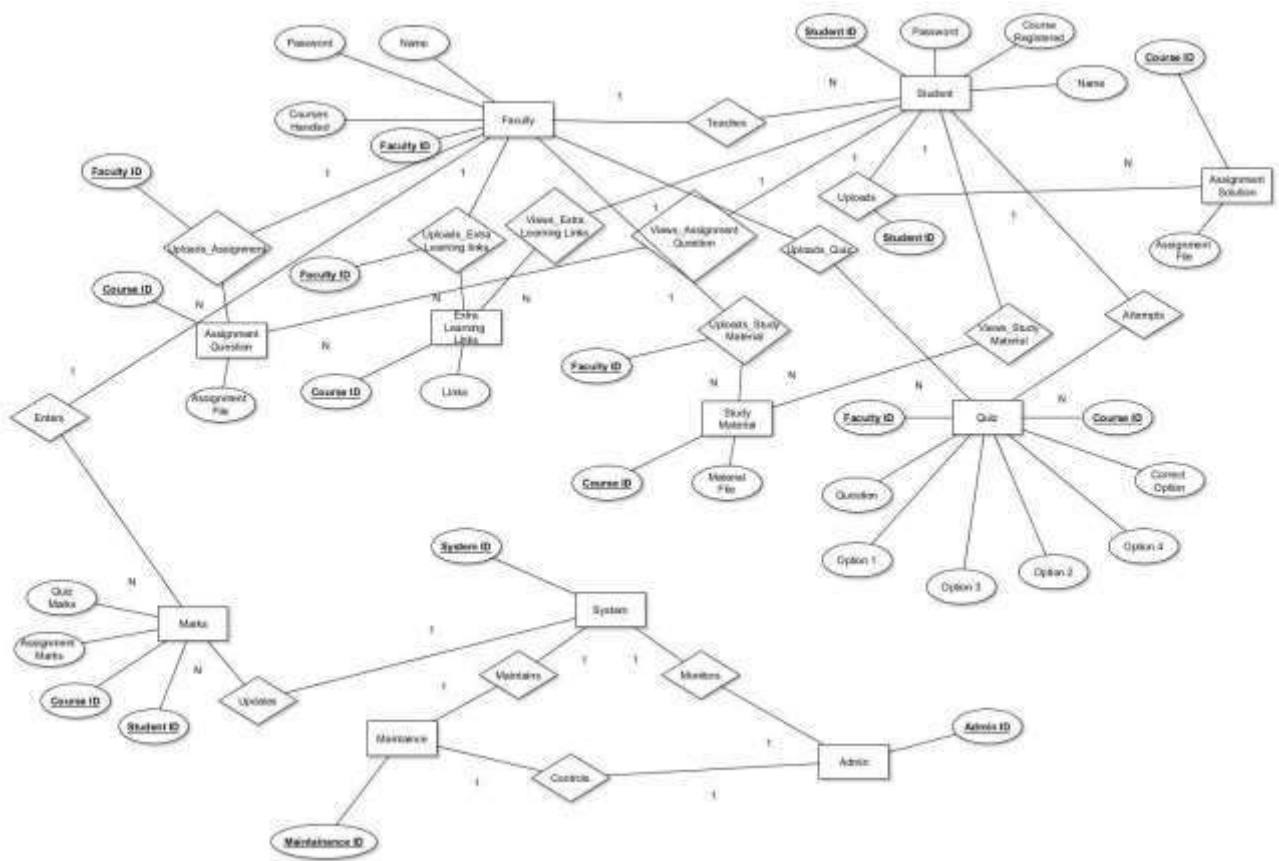

#	Risk Category	Score	Comments
BUSINESS RISK		40	N/A
1	Implementation complexity and impact to processes and business areas:	20	
	- Implementation is complex, though team has prior experience	20	
2	Business Dependencies that might impact implementation:	10	
	- No impact, No business dependencies exist	10	
3	Outages required during the implementation:	10	
	- None required	10	
TECHNOLOGY RISK		200	N/A
4	Type of Project:	120	
	- Maintenance (e.g., correct problems)	5	
	- Enhancement (e.g., add new features)	10	
	- Product introduction	15	
	- Process improvement/re-engineering	20	
	- New development – replace existing system	30	
	- Implementation of software package in-house	40	
5	External Vendor Involvement:	10	
	- No, an internal partner will be used for some project activities	10	

6	Level of vendor support necessary for the technology after implementation:	30	
	- Minor support necessary (e.g., maintenance only)	30	
7	Newness of Technology (hardware, systems, databases, communication, etc.) used in the project:	10	
	- Technology is not new and has been proven or tested	10	
8	Availability of Project Team Resources	30	
	- We have the resources with the appropriate skill sets	10	
	- We have resources but they will need to be trained	20	
IMPLEMENTATION RISK		10	N/A
9	Will the Office for General Counsel or Purchasing be used during the negotiation, creation, or modification of the contract?	0	
	- No contract is required for project.	0	
10	Has the Business Case been developed, reviewed and approved:	10	
	- Yes, the Business Case/justification is documented and fully approved	10	
11	Additional project risks not previously addressed ¹ :	0	
	- - -		
TOTAL PROJECT RISK SCORE		250	FINAL PROJECT RISK RATING: [RATING]

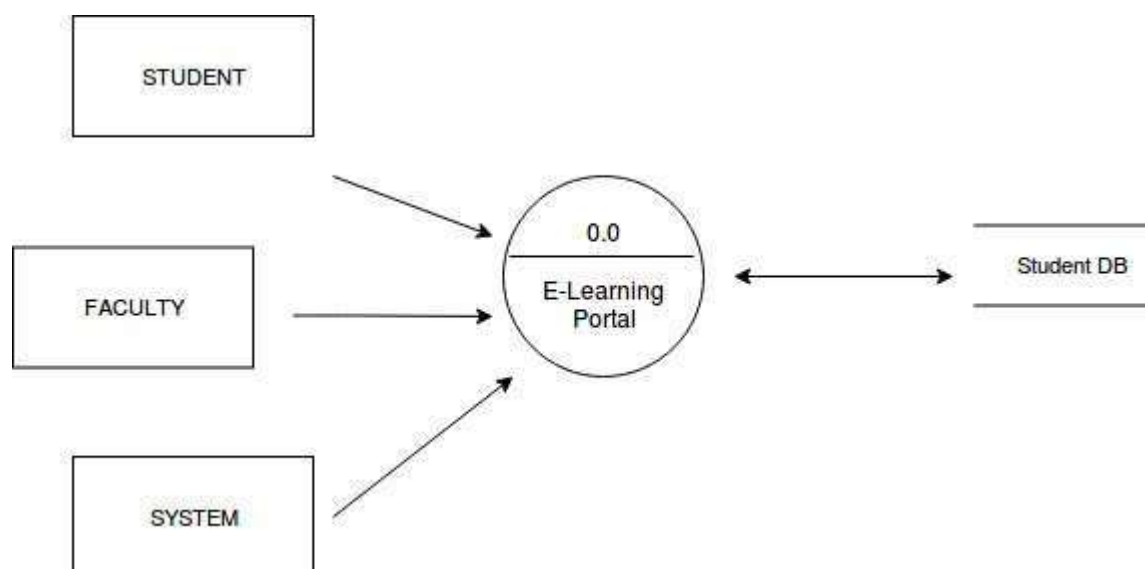

#	Risk statement		(Scale 1-100%)	(Scale 1-10)	Exposure	Mitigation
	Condition	Consequence	Probability	Impact		
1	The CTO might not be available 50 percent of the time, as required.	The project could be delayed. Incorrect decisions could be made.	80%	9	7.2	Gain commitment to 50 percent of available CTO time.

2	Possible denial of service attack.	Non-availability of the system to the customers and end users.	70%	10	7	Use of firewall technology, and procedures for keeping such technology updated.
3	Catalog data might require conversion. None is currently planned for.	Reduced ability of the system to access and manipulate the data as required.	80%	8	6.4	Determine extent of problem. If necessary, develop scripts to standardize the format of data.
4	Customer data might require conversion. None is currently planned for.	Reduced ability of the system to access and manipulate the data as required.	80%	8	6.4	Determine extent of problem. If necessary, develop scripts to standardize the format of data.
5	If sales drop, the \$750,000 project budget might be reduced or cancelled.	Project cancellation, delay, or scope reduction.	50%	10	5	No action possible within the scope of the project.
6	Customer data might be incomplete, making analysis difficult.	Reduced ability to analyze customer information to identify best customers.	80%	6	4.8	Determine extent of problem and how significant the data is to analysis. If necessary, consider population of missing data.
7	New data might not be available for searching on a timely basis.	Decisions could be made on the basis of incomplete information.	90%	4	3.6	Schedule incremental updates to the search index as frequently as the technology will allow.

Important Screenshots:

Homepage:

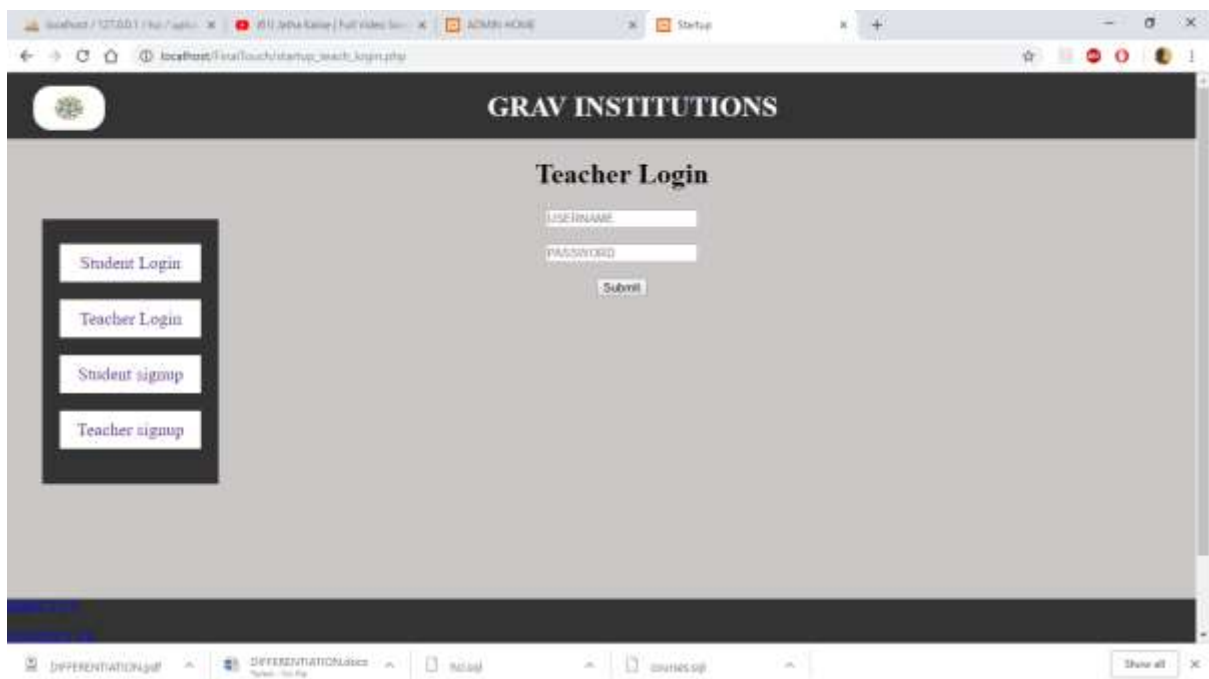

Figure 1 Teacher Login Page

Figure 3 shows the GUI that has been designed by us for the teacher login.

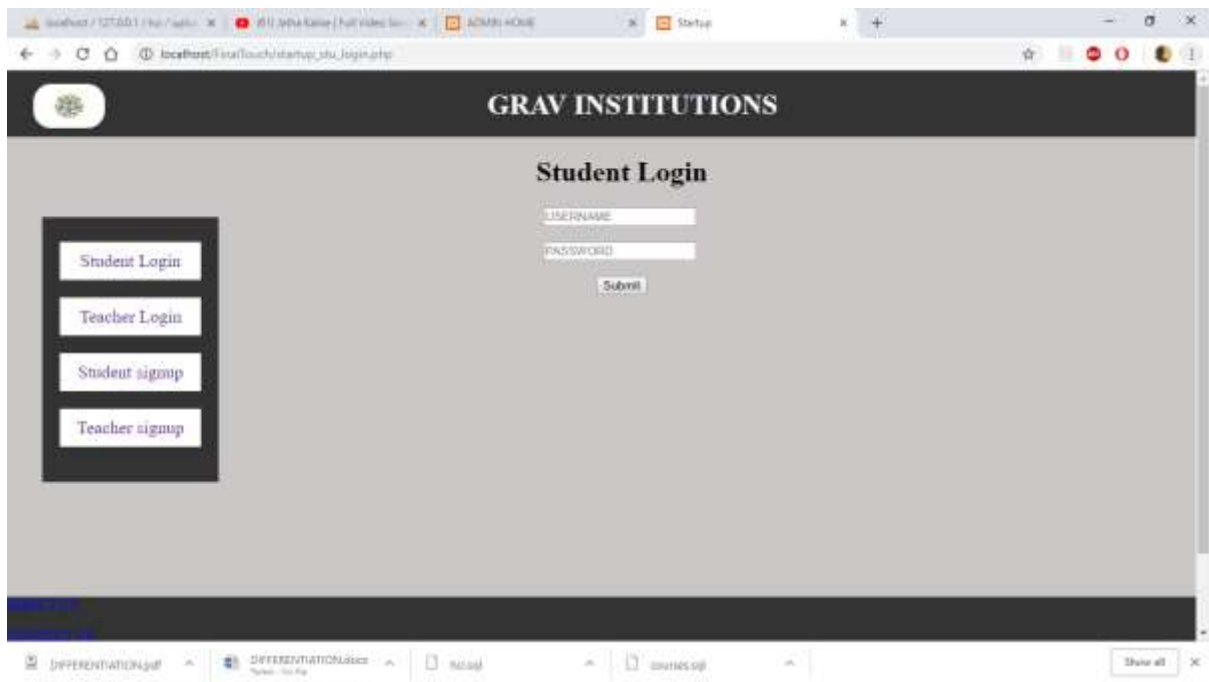

Figure 2 Student Login Page

Figure 4 shows the GUI that has been designed by us for the student login.

Sign Up:

We have given separate signup forms for the student and the users. The data taken from the form is then stored in the database.

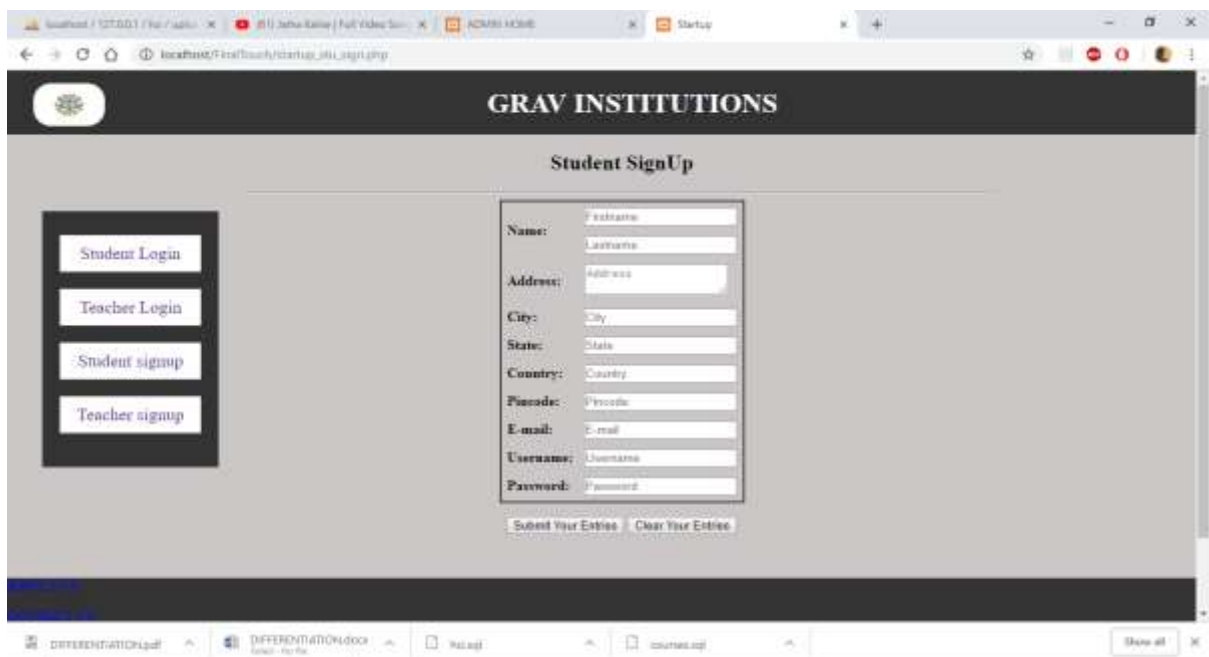

Figure 3 Sign Up page

Figure 5 shows the signup page for the students. It has interactive voice for helping blind students.

Student Home Page:

We have implemented three features in this page. The student can register for a course by selecting the select course. He can view registered courses by selecting enrolled course and view quizzes.

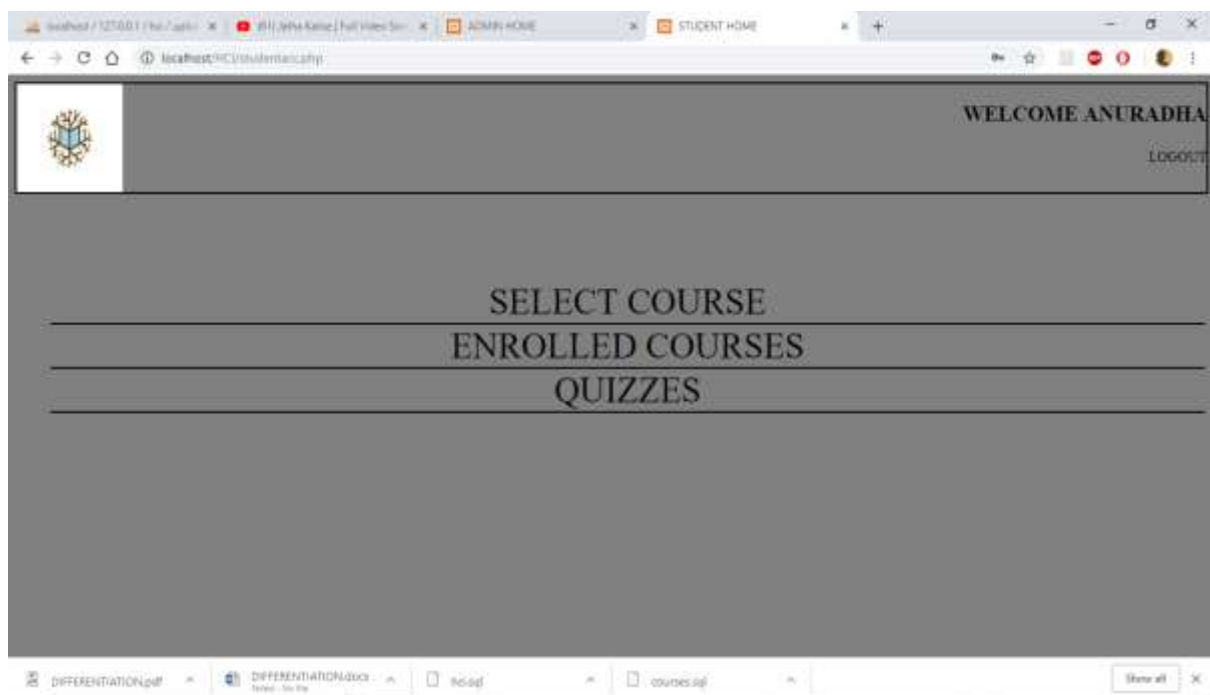

Figure 4 Student Home Page

Figure 7 shows the design of the student home page.

Select Course:

The student can register for new courses from this page. After clicking Register the course gets added to enrolled courses list.

Figure 5 Course Registration Page

Figure 8 shows the design of the course registration page for the students.

Enrolled Courses:

The student can view the list of courses that he has registered for. By clicking view he can view each course in detail.

Figure 6 View Registered Courses

Figure 9 shows the design for the enrolled courses page.

Quizzes:

The student can view the list of courses that have been posted by the teachers. All quizzes are multiple choice and have speech recognition for the blind students.

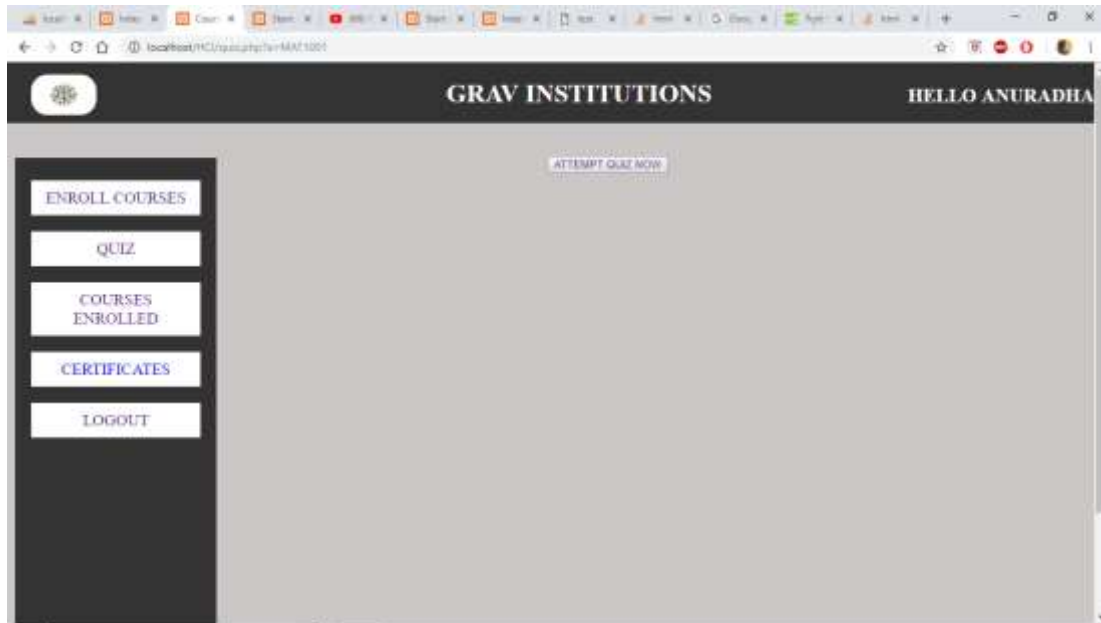

Figure 7 Quiz Start Page

Figure 10 shows the startup page for the quiz. Students can attempt the by clicking the button provided.

Figure 8 Example Quiz

Figure 7 shows the design of the student home page.

Prepare Quiz:

The teacher can prepare quizzes for any subject from the list of subjects that the teacher handles.

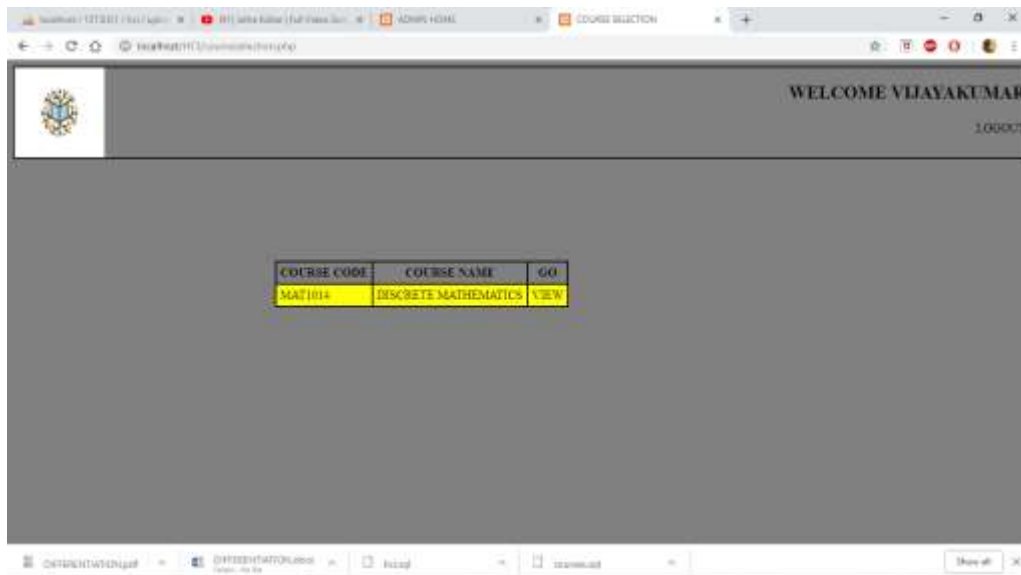

Figure 11 Prepare Quiz Page

Manage Quiz:

The teacher can enable and disable the prepared quizzes for the students from this page.

Figure 12 Manage Quiz Page

Uploads:

The teacher can upload study materials for the selected subject.

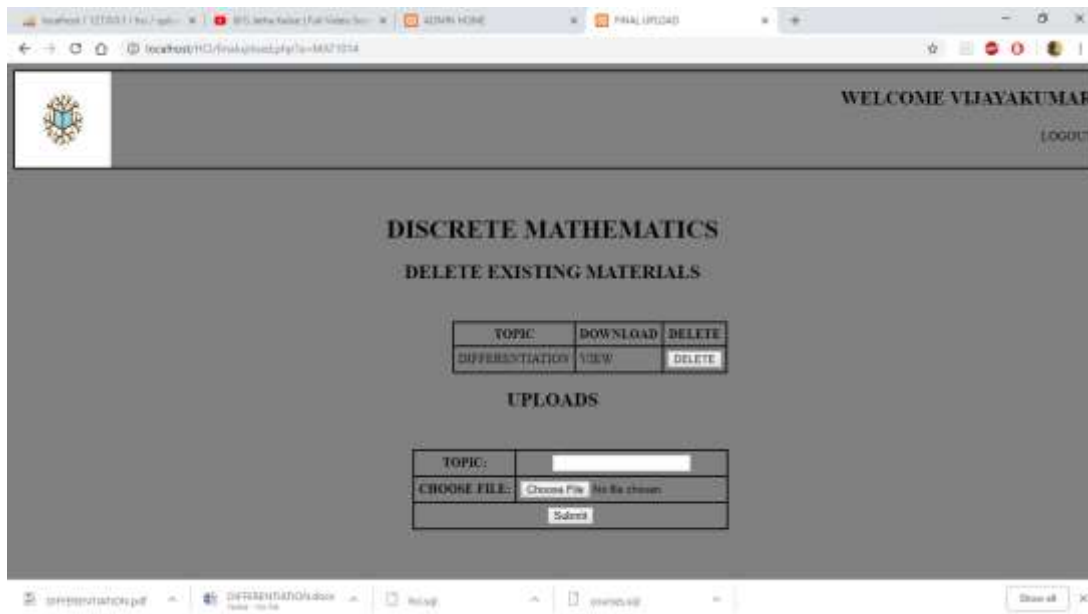

Figure 13 Course Material Page

Figure 17 shows the course upload page for teachers. The teachers can upload study materials for the students from this page.

Sign up page:

A screenshot of a web browser displaying a sign-up page. The browser's address bar shows the URL `localhost:8085/HCI/final.html`. The page contains a series of form fields and labels for user registration. The labels are: **NAME:**, **check name**, **AGE:**, **check age**, **USERNAME:**, **check username**, **PASSWORD:**, **check pwd**, **CONFIRM PASSWORD:**, **check confirm pwassword**, **DOB:**, and **check dob**. Each label is followed by an empty text input field. At the bottom of the form, there is a **Submit** button. The browser's tab bar shows multiple tabs, including the current one and others for `localhost:8085/HCI/blindacc.php`, `localhost:8085 / 127.0.0.1 / hci /`, and `WhatsApp`.
